- ▷ Implemented **WebSockets** to enable **ultra-low-latency, bidirectional communication**.
- ▷ Designed an **efficient stock search system with OpenSearch**, allowing users to quickly find and track stocks.
- ▷ Architected a **scalable microservices system**, leveraging **MongoDB** for the watchlist manager and **Prisma with PostgreSQL** for order management.
- ▷ **Optimized inter-service communication** by implementing **gRPC**, significantly improving performance over traditional HTTP.
- ▷ Ensured high performance and scalability through **load testing with k6**, validating system stability under heavy traffic.

◦ Project B: [Maternal Health Risk Classification]

08 2024 – 09 2024

Tools: [pandas, numpy, matplotlib, scikit-learn, GitHub] 

- ▷ Performed **Exploratory Data Analysis (EDA)** and data preprocessing to clean and transform raw data.
- ▷ Implemented and compared multiple classification models, including **Logistic Regression, SVC, Random Forest, CatBoost, K-Nearest Neighbors, XGBoost, and AdaBoost**.
- ▷ **Achieved 83% accuracy** by optimizing features and fine-tuning hyperparameters.
- ▷ Developed end-to-end **ML pipelines** for efficient training, evaluation, inference, and scalability.
- ▷ Built a **Flask-based web application** to serve the model via REST API.
